Is your vehicle's FM radio not working?

Stream the movie's audio over your smartphone or tablet with 4 easy steps...

audiofetch

1. **Connect to the Wi-Fi network named "Dependable Audio"**
2. **Download the AudioFetch app from the App Store or Play Store.**
3. **Launch the app and allow any permissions to find local devices on the network so your device can connect to our audio server, if asked.**
4. **Select the channel with the corresponding screen number you are on (Not available on Screen Four, expected spring of 2027).**

On some devices, upon opening the AudioFetch app for the first time after installing, the app must be fully closed and reopened before it will connect to our audio server.

Performance varies based on device age and capability, network congestion, and location within the drive in. AudioFetch is meant as a back-up audio source.

Some Bluetooth speakers impart a slight delay in the audio feed. If connecting a Bluetooth device please be mindful of any delay and keep the volume low if a delay is present as to not disturb fellow movie watchers nearby.
